

ABSTRACT

A first inlet portion (4), a second inlet portion (6), a first outlet portion (5), and a second outlet portion (7) are fixed to a fixing member (8), and a connecting tube portion (9) is provided between the first outlet portion (5) and the second inlet portion (6). Further, the first inlet portion (4) and the second inlet portion (6) are fixed so as to be in a non-parallel state such that the distance between the two increases as they depart from the fixing member (8), and the first outlet portion (5) and the second outlet portion (7) are similarly arranged in a non-parallel state, the first and second inlet portions (4) and (6) and the first and second outlet portions (5) and (7) being fixed so as to be arranged symmetrically. Further, the first outlet portion (5), the second inlet portion (6), and the connecting tube portion (9) are arranged such that their tube axes are in a straight line. Further, the distance between driven portions (10) is made small.
